DETAILED ACTION

1. Applicant's arguments, see Appeal Brief, filed on 6/14/04, with respect to the merits of Takei et al, have been fully considered and are persuasive. The rejections of Takei et al have been withdrawn. Upon further consideration by the examiner, Takei does not teach ablative etching the heat treated coated block to form unmetallized areas that are recessed into the block of ceramic material, or to form unmetallized recessed areas on the block.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: the prior art does not teach all of the limitations of the claimed invention including heat treating the coated block, then subsequently ablatively etching the heat treated coated block to form a pattern of metallized and unmetallized areas that are recessed into the block of ceramic material, or to form a pattern of unmetallized recessed areas on the block.

The examiner notes that the closest prior art reference is directed to Phillips et al (U. S. Patent 5,162,760). Phillips discloses a process that includes: forming a block 14 of ceramic material that has holes 20, 22; covering the block with a conductive coating; and ablatively etching the heat treated coated block to form a pattern of metallized and unmetallized areas on the block, with the unmetallized areas forming a recess in the block of material. However, Phillips nowhere mentions any heat treating whatsoever, much less any heat treating subsequent to coating the block with a conductive coating. To modify Phillips by including a heat treating step would destroy the block material of Phillips.

Accordingly, Claims 27-38 are allowed.
